DHS Compliant Waste Receptacle

The Department of Homeland Security has issued a Security Directive to recommend clear plastic trash receptacles for use at many rail locations across America. Perfect for airports as well.

Using the only side opening doors on the market, the contents are removed from the side instead of the top to prevent costly back injuries. These receptacles utilize clear acrylic panels to provide complete visibility of the contents. Esthetically pleasing yet manufactured using high-grade materials and finishes to provide exceptional corrosion resistance for the harshest of environments. Panels and tops are replaceable in case of damage.
